REPORT OF ANALYSIS

Sample: #4781
Sample markings:

pH

9.4

Metal Content - Spectrographic Scanning

Major elements - Calcium, Magnesium

Minor elements - Aluminum

Trace elements - Zinc, Iron, Copper, Silicon, Cadmium,
Titanium, Silver

This possibly could be used as a light top dressing where
lime would not be harmful. The organics might have
~~some adverse effect on plant life.~~

I see no problem with landfill.

Discharge into streams would be harmful to fish and
would be illegal because of pH, solids, etc.

Respectfully submitted,

Donald E. Nickol

Donald E. Nickol,
President
